Acquisitions

SII strengthens its capabilities in the aerospace and defense sectors through the acquisition of Airtificial's and Aertec Solutions' activities

The SII Group, a specialist in engineering, technology consulting, and digital services, announces the acquisition of the manufacturing engineering activities of Airtificial and Aertec Solutions.

This transaction results in the integration of nearly 560 employees: 490 in Spain, 20 in France, 20 in the United Kingdom, and 30 in Germany.

It enables the Group to significantly enhance its capabilities in the aerospace and defense sector and to strengthen its position across the entire manufacturing engineering value chain.

With this acquisition, SII reaches a new milestone in its development and further reinforces its position as a leading player in aerospace and defense.

"This acquisition goes far beyond strengthening our capabilities: above all, it represents a coming together of teams, expertise and cultures. We are delighted to welcome these new employees, who will play a lasting role in enriching our know-how and supporting our clients in their industrial transformations," said Didier Bonnet, Chief Executive International.

A structuring transaction at European level

This acquisition is fully aligned with SII's growth strategy and strengthens its expertise in industrial engineering, particularly in manufacturing engineering and related services.

It also delivers tangible benefits in each of the countries concerned: it consolidates a major industrial base in Spain by doubling the workforce, strengthens client proximity in France, supports aerospace programmes in the United Kingdom, and expands technical expertise and industrial coverage in Germany.

Beyond the integration of new teams and technological expertise, this transaction represents a key milestone in the Group's ability to support its clients end-to-end, from design through to production, with an integrated approach and a strengthened on-the-ground presence.

A strengthened position in a transforming sector

Against a backdrop of rapidly increasing production rates, evolving industrial models and growing sustainability requirements, SII reaffirms its role as a strategic partner to the industry's leading players.

Present in 21 countries, the Group leverages its multidisciplinary teams to enhance industrial performance, accelerate the digitalisation of processes and strengthen the resilience of production chains.

Comprehensive expertise in manufacturing engineering

SII operates across the entire value chain, from the design and optimisation of industrial processes to tooling development and maintenance, work preparation, digital integration and production support.

Its model is built on strong operational proximity and the ability to ensure continuity between engineering and industrial execution, guaranteeing quality, performance and agility for its clients.

About the SII Group

The SII Group is an engineering and technology consulting company (ICT) and a digital services company (ESN), founded in 1979 by Bernard HUVÉ, an engineer by training. The Group employs more than 16,000 people across 21 countries, with a network of 100 local offices, and recruits, on average, over 3,000 consultants and engineers each year who work daily to integrate and develop new technologies and to evolve information systems.

Committed to delivering high-value-added and innovative solutions, SII works with major international clients across a wide range of sectors, including aerospace, space and defense, banking and insurance, telecommunications, energy, retail, transport and industry.

Awarded EcoVadis Gold and Great Place to Work certification, the SII Group stands out for its corporate responsibility policy, which promotes a sustainable and digital world, as well as for its employer brand, reflecting its corporate culture and values, "Let's Tech Together".

The SII Group reported revenue of €1,192 million for the 2025/2026 financial year, ending 31 March.
